

ABSTRACT OF THE DISCLOSURE

A method is disclosed for generating a calibration target on a medium. The
5 method can include the operation of inserting the medium into a printer with a first
orientation. A further operation can be printing a first calibration feature at a first
lateral location on the medium. Another operation can be reinserting the medium
into the printer with a second orientation rotated 180 degrees from the first
orientation. A second calibration feature can be printed at a second lateral
10 location on the medium.
